

EXERCISE 8.1

PAGE: 157

1. Find the ratio of:**(a) ₹ 5 to 50 paise****Solution:-**

We know that,

$$₹ 1 = 100 \text{ paise}$$

Then,

$$₹ 5 = 5 \times 100 = 500 \text{ paise}$$

Now we have to find the ratio,

$$= 500/50$$

$$= 10/1$$

So, the required ratio is 10:1.

(b) 15 kg to 210 g**Solution:-**

We know that,

$$1 \text{ kg} = 1000 \text{ g}$$

Then,

$$15 \text{ kg} = 15 \times 1000 = 15000 \text{ g}$$

Now we have to find the ratio,

$$= 15000/210$$

$$= 1500/21$$

$$= 500/7 \quad \dots [\because$$

divide both by 3]

So, the required ratio is 500:7.

(c) 9 m to 27 cm**Solution:-**

We know that,

$$1 \text{ m} = 100 \text{ cm}$$

Then,

$$9 \text{ m} = 9 \times 100 = 900 \text{ cm}$$

Now we have to find the ratio,

$$= 900/27$$

$$= 100/3 \quad \dots [\because]$$

So, the required ratio is 100: 3.

divide both by 9]

30 days to 36 hours

(d)

Solution:-

We know that,

$$1 \text{ day} = 24 \text{ hours}$$

Then,

$$30 \text{ days} = 30 \times 24 = 720 \text{ hours}$$

Now we have to find the ratio,

$$= 720/36$$

$$= 20/1 \quad \dots [\because \text{divide both by } 36]$$

So, the required ratio is 20: 1.

2. In a computer lab, there are 3 computers for every 6 students. How many computers will be needed for 24 students?

Solution:-

From the question it is given that,

Number of computer required for 6 students = 3

$$\begin{aligned} \text{So, number of computer required for 1 student} &= (3/6) \\ &= \frac{1}{2} \end{aligned}$$

$$\begin{aligned} \text{So, number of computer required for 24 students} &= 24 \times \frac{1}{2} \\ &= 24/2 \\ &= 12 \end{aligned}$$

\therefore Number of computer required for 24 students is 12 computers.

3. Population of Rajasthan = 570 lakhs and population of UP = 1660 lakhs. Area of Rajasthan = 3 lakh km² and area of UP = 2 lakh km².

(i) How many people are there per km² in both these States?

(ii) Which State is less populated? Solution:-

(i) From the question, it is given that,

Population of Rajasthan = 570 lakh

Area of Rajasthan = 3 lakh km^2

Then, population of Rajasthan in 1 km^2 area = $(570 \text{ lakh}) / (3 \text{ lakh km}^2)$
= 190 people per km^2

Population of UP = 1660 Lakh

Area of UP = 2 Lakh km^2

Then, population of UP in 1 lakh km^2 area = $(1660 \text{ lakh}) / (2 \text{ lakh km}^2)$
= 830 people per km^2

(ii) By comparing the two states Rajasthan is the less populated state.

EXERCISE 8.2

PAGE: 164

1. Convert the given fractional numbers to percent.**(a) $1/8$** **Solution:-**

In order to convert a fraction into a percentage multiply the fraction by 100 and put the percent sign %.

$$= (1/8) \times 100 \%$$

$$= 100/8 \%$$

$$= 12.5\%$$

(b) $5/4$ **Solution:-**

In order to convert a fraction into a percentage multiply the fraction by 100 and put the percent sign %.

$$= (5/4) \times 100 \%$$

$$= 500/4 \%$$

$$= 125\%$$

(c) $3/40$ **Solution:-**

In order to convert a fraction into a percentage multiply the fraction by 100 and put the percent sign %.

$$\begin{aligned} &= (3/40) \times 100 \% \\ &= 300/40 \% \\ &= 30/4 \% \\ &= 7.5\% \end{aligned}$$

(d) 2/7

Solution:-

In order to convert a fraction into a percentage multiply the fraction by 100 and put the percent sign %.

$$\begin{aligned} &= (2/7) \times 100 \% \\ &= 200/7 \% \\ &= 28\frac{4}{7}\% \end{aligned}$$

2. Convert the given decimal fraction to percent.

(a) 0.65

Solution:-

First we have to remove the decimal point,

$$= 65/100$$

Now,

Multiply by 100 and put the percent sign %.

We have,

$$\begin{aligned} &= (65/100) \times 100 \\ &= 65\% \end{aligned}$$

(b) 2.1

Solution:-

First we have to remove the decimal point,

$$= 21/10$$

Now,

Multiply by 100 and put the percent sign %.

We have,

$$= (21/10) \times 100$$
$$= 210\%$$

(c) 0.02

Solution:-

First we have to remove the decimal point,

$$= 2/100$$

Now,

Multiply 100 and put the percent sign %.

We have,

$$= (2/100) \times 100$$
$$= 2\%$$

(d) 12.35

Solution:-

First we have to remove the decimal point,

$$= 1235/100$$

Now,

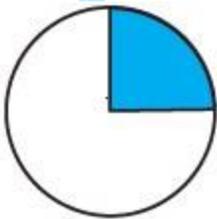

Multiply by 100 and put the percent sign %.

We have,

$$= (1235/100) \times 100$$
$$= 1235\%$$

3. Estimate what part of the figures is coloured and hence find the per cent which is coloured.

(i)

Solution:-

By observing the given figure,

We can able to identify that 1 part is shaded out of 4 equal parts.

It is represented by a fraction = $\frac{1}{4}$

Then,

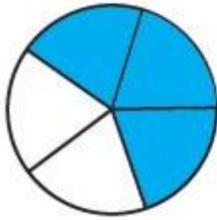

$$= \frac{1}{4} \times 100$$

$$= \frac{100}{4}$$

$$= 25\%$$

Hence, 25% of figure is coloured.

(ii)

Solution:-

By observing the given figure,

We can able to identify that 3 part is shaded out of 5 equal parts.

It is represented by a fraction = $\frac{3}{5}$

Then,

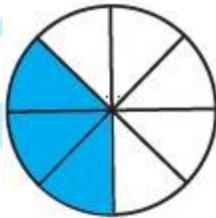

$$= \left(\frac{3}{5}\right) \times 100$$

$$= \frac{300}{5}$$

$$= 60\%$$

Hence, 60% of figure is coloured.

(iii)

Solution:-

By observing the given figure,

We can able to identify that 3 part is shaded out of 8 equal parts.

It is represented by a fraction = $\frac{3}{8}$

Then,

$$= \left(\frac{3}{8}\right) \times 100$$

$$= 300/8$$

$$= 37.5\%$$

Hence, 37.5% of figure is coloured.

4. Find:

(a) 15% of 250

Solution:-

We have,

$$= (15/100) \times 250$$

$$= (15/10) \times 25$$

$$= (15/2) \times 5$$

$$= (75/2)$$

$$= 37.5$$

(b) 1% of 1 hour

Solution:-

We know that, 1 hour = 60 minutes

Then,

$$1\% \text{ of } 60 \text{ minutes}$$

$$1 \text{ minute} = 60 \text{ seconds}$$

$$60 \text{ minutes} = 60 \times 60 = 3600 \text{ seconds}$$

Now,

$$1\% \text{ of } 3600 \text{ seconds}$$

$$= (1/100) \times 3600$$

$$= 1 \times 36$$

$$= 36 \text{ seconds}$$

(c) 20% of ₹ 2500

Solution:-

We have,

$$= (20/100) \times 2500$$

$$= 20 \times 25$$

$$= ₹ 500$$

(d) 75% of 1 kg

Solution:-

We know that, 1 kg = 1000 g

Then,

$$\begin{aligned} & 75\% \text{ of } 1000 \text{ g} \\ & = (75/100) \times 1000 \\ & = 75 \times 10 \\ & = 750 \text{ g} \end{aligned}$$

5. Find the whole quantity if

(a) 5% of it is 600

Solution:-

Let us assume the whole quantity be x,

Then,

$$\begin{aligned} (5/100) \times (x) &= 600 \\ X &= 600 \times (100/5) \\ X &= 60000/5 \\ X &= 12000 \end{aligned}$$

(b) 12% of it is ₹ 1080.

Solution:-

Let us assume the whole quantity be x,

Then,

$$\begin{aligned} (12/100) \times (x) &= 1080 \\ X &= 1080 \times (100/12) \\ X &= 540 \times (100/6) \\ X &= 90 \times 100 \\ X &= ₹ 9000 \end{aligned}$$

(c) 40% of it is 500k km

Solution:-

Let us assume the whole quantity be x,

Then,

$$(40/100) \times (x) = 500$$

$$X = 500 \times (100/40)$$

$$X = 500 \times (10/4)$$

$$X = 500 \times 2.5$$

$$X = 1250 \text{ km}$$

(d) 70% of it is 14 minutes

Solution:-

Let us assume the whole quantity be x,

Then,

$$(70/100) \times (x) = 14$$

$$X = 14 \times (100/70)$$

$$X = 14 \times (10/7)$$

$$X = 20 \text{ minutes}$$

(e) 8% of it is 40 liters

Solution:-

Let us assume the whole quantity be x,

Then,

$$(8/100) \times (x) = 40$$

$$X = 40 \times (100/8)$$

$$X = 40 \times (100/8)$$

$$X = 40 \times 12.5$$

$$X = 500 \text{ liters}$$

6. Convert given percent to decimal fractions and also fractions in simplest forms: (a)

25%

Solution:-

First convert the given percentage into fraction and then put the fraction into decimal form.

$$= (25/100)$$

$$= \frac{1}{4}$$

$$= 0.25$$

(b) 150%

Solution:-

First convert the given percentage into fraction and then put the fraction into decimal form.

$$= (150/100)$$

$$= 3/2$$

$$= 1.5$$

(c) 20%

Solution:-

First convert the given percentage into fraction and then put the fraction into decimal form.

$$= (20/100)$$

$$= 1/5$$

$$= 0.2$$

(d) 5%

Solution:-

First convert the given percentage into fraction and then put the fraction into decimal form.

$$= (5/100)$$

$$= 1/20$$

$$= 0.05$$

7. In a city, 30% are females, 40% are males and remaining are children. What per cent are children?

Solution:-

From the question, it is given that

Percentage of female in a city = 30%

Percentage of male in a city = 40%

Total percentage of male and female both = 40% + 30%

$$= 70%$$

Now we have to find the percentage of children = 100 – 70

$$= 30%$$

So, 30% are children.

8. Out of 15,000 voters in a constituency, 60% voted. Find the percentage of voters who did not vote. Can you now find how many actually did not vote? Solution:-

From the question, it is given that

Total number of voters in the constituency = 15000

Percentage of people who voted in the election = 60%

Percentage of people who did not voted in the election = $100 - 60$
 $= 40\%$

Total number of voters who did not voted in the election = 40% of 15000
 $= (40/100) \times 15000$
 $= 0.4 \times 15000$
 $= 6000$ voters

\therefore 6000 voters did not vote.

9. Meeta saves ₹ 4000 from her salary. If this is 10% of her salary. What is her salary?

Solution:-

Let us assume Meeta's salary be ₹ x,

Then,

$$10\% \text{ of } ₹ x = ₹ 4000$$

$$(10/100) \times (x) = 4000$$

$$X = 4000 \times (100/10)$$

$$X = 4000 \times 10$$

$$X = ₹ 40000$$

\therefore Meeta's salary is ₹ 40000.

10. A local cricket team played 20 matches in one season. It won 25% of them. How many matches did they win?

Solution:-

From the question, it is given that

Total matches played by a local team = 20

Percentage of matches won by the local team = 25%

Then,

$$\begin{aligned}\text{Number of matches won by the team} &= 25\% \text{ of } 20 \\ &= (25/100) \times 20 \\ &= 25/5 \\ &= 5 \text{ matches.}\end{aligned}$$

∴ The local team won 5 matches out of 20 matches.

EXERCISE 8.3

PAGE: 171

1. Tell what is the profit or loss in the following transactions. Also find profit per cent or loss per cent in each case.

(a) Gardening shears bought for ₹ 250 and sold for ₹ 325.

Solution:-

From the question, it is given that

Cost price of gardening shears = ₹ 250

Selling price of gardening shears = ₹ 325

Since $(SP) > (CP)$, so there is a profit

$$\begin{aligned}\text{Profit} &= (SP) - (CP) \\ &= ₹ (325 - 250) \\ &= ₹ 75\end{aligned}$$

$$\begin{aligned}\text{Profit \%} &= \{(Profit/CP) \times 100\} \\ &= \{(75/250) \times 100\} \\ &= \{7500/250\} \\ &= 750/25 \\ &= 30\%\end{aligned}$$

(b) A refrigerator bought for ₹ 12,000 and sold at ₹ 13,500.

Solution:-

From the question, it is given that

Cost price of refrigerator = ₹ 12000

Selling price of refrigerator = ₹ 13500

Since $(SP) > (CP)$, so there is a profit

$$\begin{aligned}\text{Profit} &= (SP) - (CP) \\ &= ₹ (13500 - 12000)\end{aligned}$$

$$= ₹ 1500$$

$$\begin{aligned}\text{Profit \%} &= \left\{ \frac{\text{Profit}}{\text{CP}} \times 100 \right\} \\ &= \left\{ \frac{1500}{12000} \times 100 \right\} \\ &= \left\{ \frac{150000}{12000} \right\} \\ &= 150/12 \\ &= 12.5\%\end{aligned}$$

(c) A cupboard bought for ₹ 2,500 and sold at ₹ 3,000.

Solution:-

From the question, it is given that

Cost price of cupboard = ₹ 2500

Selling price of cupboard = ₹ 3000

Since $(SP) > (CP)$, so there is a profit

$$\begin{aligned}\text{Profit} &= (SP) - (CP) \\ &= ₹ (3000 - 2500) \\ &= ₹ 500\end{aligned}$$

$$\begin{aligned}\text{Profit \%} &= \left\{ \frac{\text{Profit}}{\text{CP}} \times 100 \right\} \\ &= \left\{ \frac{500}{2500} \times 100 \right\} \\ &= \left\{ \frac{50000}{2500} \right\} \\ &= 500/25 \\ &= 20\%\end{aligned}$$

(d) A skirt bought for ₹ 250 and sold at ₹ 150.

Solution:-

Since $(SP) < (CP)$, so there is a loss

$$\begin{aligned}\text{Loss} &= (CP) - (SP) \\ &= ₹ (250 - 150) \\ &= ₹ 100\end{aligned}$$

$$\begin{aligned}\text{Loss \%} &= \left\{ \frac{\text{Loss}}{\text{CP}} \times 100 \right\} \\ &= \left\{ \frac{100}{250} \times 100 \right\} \\ &= \left\{ \frac{10000}{250} \right\} \\ &= 40\%\end{aligned}$$

2. Convert each part of the ratio to percentage:**(a) 3 : 1****Solution:-**We have to find total parts by adding the given ratio = $3 + 1 = 4$

$$1^{\text{st}} \text{ part} = \frac{3}{4} = \left(\frac{3}{4}\right) \times 100\%$$

$$= 3 \times 25\%$$

$$= 75\%$$

$$2^{\text{nd}} \text{ part} = \frac{1}{4} = \left(\frac{1}{4}\right) \times 100\%$$

$$= 1 \times 25$$

$$= 25\%$$

(b) 2: 3: 5**Solution:-**We have to find total parts by adding the given ratio = $2 + 3 + 5 = 10$
 $1^{\text{st}} \text{ part} = \frac{2}{10} = \left(\frac{2}{10}\right) \times 100\%$

$$= 2 \times 10\%$$

$$= 20\%$$

$$2^{\text{nd}} \text{ part} = \frac{3}{10} = \left(\frac{3}{10}\right) \times 100\%$$

$$= 3 \times 10$$

$$= 30\%$$

$$3^{\text{rd}} \text{ part} = \frac{5}{10} = \left(\frac{5}{10}\right) \times 100\%$$

$$= 5 \times 10$$

$$= 50\%$$

(c) 1:4**Solution:-**We have to find total parts by adding the given ratio = $1 + 4 = 5$

$$1^{\text{st}} \text{ part} = \frac{1}{5} = \left(\frac{1}{5}\right) \times 100\%$$

$$= 1 \times 20\%$$

$$= 20\%$$

$$2^{\text{nd}} \text{ part} = \frac{4}{5} = \left(\frac{4}{5}\right) \times 100\%$$

$$= 4 \times 20$$

$$= 80\%$$

(d) 1: 2: 5

Solution:-

We have to find total parts by adding the given ratio = $1 + 2 + 5 = 8$

$$1^{\text{st}} \text{ part} = 1/8 = (1/8) \times 100 \%$$

$$= (100/8) \%$$

$$= 12.5\%$$

$$2^{\text{nd}} \text{ part} = 2/8 = (2/8) \times 100\%$$

$$= (200/8)$$

$$= 25\%$$

$$3^{\text{rd}} \text{ part} = 5/8 = (5/8) \times 100\%$$

$$= (500/8)$$

$$= 62.5\%$$

3. The population of a city decreased from 25,000 to 24,500. Find the percentage decrease. Solution:-

From the question, it is given that

Initial population of the city = 25000

Final population of the city = 24500

Population decrease = Initial population – Final population

$$= 25000 - 24500$$

$$= 500$$

Then,

Percentage decrease in population = $(\text{population decrease}/\text{Initial population}) \times 100$

$$= (500/25000) \times 100$$

$$= (50000/25000)$$

$$= 50/25$$

$$= 2\%$$

4. Arun bought a car for ₹ 3,50,000. The next year, the price went upto ₹ 3,70,000. What was the Percentage of price increase?

Solution:-

From the question, it is given that

Arun bought a car for = ₹ 350000

The price of the car in the next year, went up to = ₹ 370000

Then increase in price of car = ₹ 370000 - ₹ 350000
= ₹ 20000

The percentage of price increase = $(\frac{₹ 20000}{₹ 350000}) \times 100$
= $(\frac{2}{35}) \times 100$
= $\frac{200}{35}$
= $\frac{40}{7}$
= $5\frac{5}{7}$

5. I buy a T.V. for ₹ 10,000 and sell it at a profit of 20%. How much money do I get for it?

Solution:-

From the question, it is given that

Cost price of the T.V. = ₹ 10000

Percentage of profit = 20%

Profit = $(\frac{20}{100}) \times 10000$
= ₹ 2000

Then,

Selling price of the T.V. = cost price + profit
= 10000 + 2000
= ₹ 12000

∴ I will get it for ₹ 12000.

6. Juhi sells a washing machine for ₹ 13,500. She loses 20% in the bargain. What was the price at which she bought it?

Solution:-

From the question, it is given that

Selling price of washing machine = ₹ 13500

Percentage of loss = 20%

Now, we have to find the cost price washing machine By using the formula, we have:

CP = ₹ $\{(100 / (100 - \text{loss \%})) \times \text{SP}\}$

$$\begin{aligned}
 &= \{(100/(100 - 20)) \times 13500\} \\
 &= \{(100/80) \times 13500\} \\
 &= \{1350000/80\} \\
 &= \{135000/8\} \\
 &= ₹ 16875
 \end{aligned}$$

7. (i) Chalk contains calcium, carbon and oxygen in the ratio 10:3:12. Find the percentage of carbon in chalk.

Solution:-

From the question it is given that,

The ratio of calcium, carbon and oxygen in chalk = 10: 3: 12

So, total part = 10 + 3 + 12 = 25

In that total part amount of carbon = 3/25

Then,

$$\begin{aligned}
 \text{Percentage of carbon} &= (3/25) \times 100 \\
 &= 3 \times 4 \\
 &= 12 \%
 \end{aligned}$$

(ii) If in a stick of chalk, carbon is 3g, what is the weight of the chalk stick?

Solution:-

From the question it is given that,

Weight of carbon in the chalk = 3g

Let us assume the weight of the stick be x

Then,

$$\begin{aligned}
 12\% \text{ of } x &= 3 \\
 (12/100) \times (x) &= 3 \\
 X &= 3 \times (100/12) \\
 X &= 1 \times (100/4) \\
 X &= 25\text{g}
 \end{aligned}$$

∴ The weight of the stick is 25g.

8. Amina buys a book for ₹ 275 and sells it at a loss of 15%. How much does she sell it for? Solution:-

From the question, it is given that

Cost price of book = ₹ 275

Percentage of loss = 15%

Now, we have to find the selling price book, By using the formula, we have:

$$\begin{aligned} SP &= \left\{ \left(\frac{100 - \text{loss \%}}{100} \right) \times CP \right\} \\ &= \left\{ \left(\frac{100 - 15}{100} \right) \times 275 \right\} \\ &= \left\{ \left(\frac{85}{100} \right) \times 275 \right\} \\ &= \frac{23375}{100} \\ &= ₹ 233.75 \end{aligned}$$

9. Find the amount to be paid at the end of 3 years in each case:

(a) Principal = ₹ 1,200 at 12% p.a.

Solution:-

Given: - Principal (P) = ₹ 1200, Rate (R) = 12% p.a. and Time (T) = 3years.

If interest is calculated uniformly on the original principal throughout the loan period, it is called Simple interest (SI). $SI = (P \times R \times T)/100$

$$\begin{aligned} &= (1200 \times 12 \times 3) / 100 \\ &= (12 \times 12 \times 3) / 1 \\ &= ₹ 432 \end{aligned}$$

Amount = (principal + SI)

$$\begin{aligned} &= (1200 + 432) \\ &= ₹ 1632 \end{aligned}$$

(b) Principal = ₹ 7,500 at 5% p.a.

Solution:-

Given: - Principal (P) = ₹ 7500, Rate (R) = 5% p.a. and Time (T) = 3years.

If interest is calculated uniformly on the original principal throughout the loan period, it is called Simple interest (SI).

$$\begin{aligned} SI &= (P \times R \times T)/100 \\ &= (7500 \times 5 \times 3) / 100 \\ &= (75 \times 5 \times 3) / 1 \\ &= ₹ 1125 \end{aligned}$$

$$\begin{aligned}\text{Amount} &= (\text{principal} + \text{SI}) \\ &= (7500 + 1125) \\ &= ₹ 8625\end{aligned}$$

10. What rate gives ₹ 280 as interest on a sum of ₹ 56,000 in 2 years?

Solution:-

Given: - $P = ₹ 56000$, $SI = ₹ 280$, $t = 2$ years.

We know that,

$$\begin{aligned}R &= (100 \times SI) / (P \times T) \\ &= (100 \times 280) / (56000 \times 2) \\ &= (1 \times 28) / (56 \times 2) \\ &= (1 \times 14) / (56 \times 1) \\ &= (1 \times 1) / (4 \times 1) \\ &= (1/4) \\ &= 0.25\%\end{aligned}$$

11. If Meena gives an interest of ₹ 45 for one year at 9% rate p.a. What is the sum she has borrowed?

Solution:-

From the question it is given that, $SI = ₹ 45$, $R = 9\%$, $T = 1$ year, $P = ?$

$$\begin{aligned}SI &= (P \times R \times T) / 100 \\ 45 &= (P \times 9 \times 1) / 100 \\ P &= (45 \times 100) / 9 \\ &= 5 \times 100 \\ &= ₹ 500\end{aligned}$$

Hence, she borrowed ₹ 500.
